### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/12/09 has been entered.

### Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
   The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite since its scope is unclear. Since the body of the claim, as amended, includes considerable particulars of the rolled staple cartridge, it is unclear as to whether a combination of a stapler and a cartridge is being claimed, or merely a stapler, which could be used with the recited cartridge of staples, if desired. Currently, claim 1 is directed to a stapler in the preamble. If the claims were amended to recite a combination of a stapler and a staple cartridge in the preamble, for example, they could constitute a patentably distinct invention, than is currently set forth.

Art Unit: 3721

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Udagawa et al. '529.

Udagawa et al. '529 discloses a stapling apparatus comprising a feeding roller 43 driven by suitable drive mechanism; i.e. a "motor" (note: column 4, lines 60-65) for advancing a straight staple of a coil of staples (note: Fig. 9) which are accommodated in a holder/cartridge to a stapling location. The particulars of the contact location between the rolled staple cartridge and the feed roller are not given any patentably weight since only a stapler is claimed, not a combination of a stapler and cartridge, per se. Udagawa et al. '529 discloses the claimed structure of the stapler including a motor and a feeding roller.

# Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Udagawa et al. '529.

Art Unit: 3721

In the event that the stapler of Udagawa et al. '529 is interpreted not include the invention as claimed; i.e. the contact location of the feed roller relative to the rolled staple cartridge periphery, it would have been obvious to one skilled in the art to form the stapler of Udagawa et al. '529 such that the feed roller contacts an "outer circumference" of the rolled staple cartridge in order to consolidate the device and more effectively support the rolled staple cartridge.

Additionally, applicant is given Official Notice that to locate a feed roller in contact with an outer circumferential peripheral surface of a rolled material/cartridge is known. Therefore, in view of such Official Notice, it would have been obvious to one skilled in the art to form the stapler of Udagawa et al. '529 such that the feed roller contacts an "outer circumference" of the rolled staple cartridge in order to consolidate the device and more effectively support the rolled staple cartridge during delivery.

8. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Udagawa et al. '529 in view of German Patent '519 or Hoshi et al. '334.

Udagawa et al. '529 lacks the feed roller having feed teeth. German patent '519, as set forth above, discloses a feeding roller comprising teeth "d". Hoshi et al. '334 discloses a feeding roller 50 comprising a plurality of teeth thereon (note: Fig. 10). In view of the teachings of German patent '519 or Hoshi et al. '334, it would have been obvious to one skilled in the art to provide the periphery of the feeding roller of the stapler of Udagawa et al. '529 with a plurality of teeth in order to more effectively register and retain the staple coil during operation.
